

The Added Value of Seasonal Climate Forecasting for Integrated Risk Assessment

Prof. Alberto Troccoli, and the SECLI-FIRM team

University of East Anglia and World Energy & Meteorology Council, Norwich, UK

SECLI-FIRM Stakeholder Workshop, Milan, 17 January 2019

- Value quantification is important but it is more critical to build trust in the relationship between climate service scientist/provider and the industry user
- Computing skill over a long period is important but it is more critical to assess forecasts for specific cases (in a measured, non boastful, way)
- In the end, it will be through a series of wins on specific cases that confidence is built in the users

Hot off the press – ERA5 back to 1979 (from 2000) is now out!
